ABSTRACT

“*Vayasthapanam agram*”, *Acharya Charaka* has clearly pointed out the action of the wonder drug *Amalaki* as the best drug for rejuvenation. *Amalaki* is used extensively in treating many of the *netra rogas* because of its vivid action based on *rasa panchakas*. *Acharyas* have identified the *chakshushya guna* in the drug *Amalaki* which is having *tridoshahara* as *doshaghnata*. In parlance to modern science, the proven pharmaceutical actions with regards to the *Emblia officinalis* includes anti-diabetic, anti-atherosclerotic, hypolipidemic, anti-microbial, anti-inflammatory, anti-oxidant, immunomodulator, which are equally helpful in treating ample of eye diseases and even in combating complications arising out of it. The fundamentals of treating *netra rogas* include *kriyakalpas* which have shown boundless use of *Amalaki* with vast references since *vedic* period. This study shows that *Amalaki* is one of the most commonly used and important drug in treating substantial diseases of *Shalaky tantra*, ophthalmology.

KEYWORDS: *Amalaki*, *Netra rogas*, *Kriyakalpas*, *Chakshushya*.

INTRODUCTION

Various references in the Ayurvedic literature show that great stress has been laid down to protect eye sight, *Netra* being *pradhanatama* among all the *indriyas* *Ayurveda*, the immortal life science which is practiced since a long time has a different approach in treating each and every disease. *Ekamulika prayogas* have been used by later on *Nighantukaras* which has shown the most appropriate analysis of our *Acharyas* in selecting each drug in different disease.

Amalaki, is one of the herb mentioned in all the ancient scriptures of *Ayurveda*. It is cited in *Rigveda*, *Skanda purana*, *Ramayana*, *Garuda purana*. In the Vedic literature *Amalaki phala* is considered as the best among the fruits.^[1]

Amalaki**Botanical name:** *Emblia officinalis*.**Family:** Euphorbiaceae.**Vernacular names:** Kannada – Nelli.

Hindi – Amla.

English – Indian gooseberry.

Nepali – Amba.

Marathi – awla.

Gujurathi – Ambla.

Telugu – Usira kaya.

Tamil – Nellikkai.

Malayalam – Nelli.

Synonyms^[2] *Abhaya*, *Amrta*, *Dhatri*, *Vayastha*, *Vayasya*, *Vrsya*, *Tisyaphala*, *Sitaphala*, *Sriphala*.**Morphology**^[3]

- ❖ A deciduous small or middle sized tree with crooked trunk and spreading branches;
- ❖ Bark greenish grey, peeling off in conchoidal flakes; branchlets glabrous or finely pubescent, 10-20 cm long, often deciduous.
- ❖ Leaves are subsessile, 10-13 by 2.5-3mm, closely set along the branchlets, distichous, light green, glabrous, narrowly linear, obtuse, imbricate when young, having the appearance of pinnate leaves; stipules ovate, finely acute.
- ❖ Flowers greenish yellow, in axillary fascicles on the leaf-bearing branchlets, often on the naked portion below the leaves, with fimbriate bracts at the base. Male flowers numerous, on short slender pedicels. Sepals 6, oblong, obtuse, 1.2mm disk, Anthers 3 on a short central column. Female flowers few, subsessile. Sepals as in the males. Disk a lacerate cup. Ovary 3-celled; styles connate at the base, irregularly twice 2-fid with acute lobes.
- ❖ Fruit 1.3-1.6 cm. diam., fleshy, globose, with 6 obscure vertical furrows, pale yellow, of three 2-seeded crustaceous cocci. Seeds 6, 3-gonous.

Distribution: Throughout tropical and subtropical India, wild or planted, Ceylon – China, Malay Islands.

Different varieties:^[4] There are different cultivated varieties of *Embllica officinalis* available. Four varieties according to our *acharyas* are *Krishna*, *Amrita*, *Neelam*, *Kanchan*.

Rasa panchaka^[5]

- **Rasa:** *Lavana varjita pancharasa, amla pradhana.*
- **Guna:** *Laghu, ruksha, sara.*

- **Veerya:** *Sheeta.*
- **Vipaka:** *Madhura.*
- **Doshagnata:** *Tridoshahara.*
- **Rogagnata:** *Netra roga, Raktapitta, Prameha, Kushta, Arshas, Shoola, Mutrakrichra, Pradara, Somaroga.*
- **Upayojya anga:** *Patra and Phala.*

Chemical constituents^[6]

The fruits

SL. NO.	Type	Chemical constituents
1.	Hydrolysable tannins.	Emblcanin A and B, Punigluconin, Pedunculagin, Chebulinic acid, Chebulagic acid, Corilagin, Geraniin, Ellagotanin.
2.	Alkaloids	Phyllantine, Phyllembin, Phyllantidine.
3.	Phenolic	Gallic acid, Methyl gallate, Ellagic acid, Trigallayl glucose.
4.	Aminoacids	Glutamic acid, Proline, Aspartic acid, Alanine, Cystine, Lysine.
5.	Carbohydrates	Pectin.
6.	Vitamins	Ascorbic acid.
7.	Flavanoids	Queroetin, kaempferol
8.	Organic acids	Citric acid.

- ❖ Of emblica are rich in tannins, reputed to contain high amounts of ascorbic acid (vitamin C).
- ❖ Have 28% of the total tannins distributed in the whole plant.
- ❖ The fruit contains two hydrolysable tannins Emblcanin A and B, which have antioxidant properties; one hydrolysis gives gallic acid, ellagic acid and glucose wherein the other gives ellagic acid and glucose.
- ❖ The fruit also contains Phyllembin, punigluconin, pedunculagin, corilagin.
- The leaves are rich in tannins.
- Bark contains tannins, leucodelphinidin, procyanidine.
- The root contains ellagic acid, oleanolic aldehyde and lupeol.
- The seeds yield a fixed oil which is brownish yellow in colour. It has the following fatty acids: linolenic acid, linoleic, oleic acid, stearic, palmitic, myristic acid.

Active constituents: Tannins and Gallic acid.

Nutrients in Amalaki:⁷

The nutrient source of Amalaki (mature, fresh) per 100 grams is as follows

Nutrients	Percentage or per 100 gram
Calories	60
Moisture	81.2
Fibre	3.4
Macro nutrients	
Protein	0.4
Fat	0.5
Carbohydrates	14
Micro nutrients	
Vitamin B1	28
Vitamin B3	0.4
Nicotinic acid	0.2
Vitamin C	720
Calcium	15
Iron	1
Phosphorous	21

Pharmacological actions:^[8] Anti-diabetic, Hypoglycaemic, Anti-peptic ulcer activity, Hypolipidemic and Anti-atherosclerotic, Anti-inflammatory, Antimicrobial, Anti-emetic, Anti-oxidant, Analgesic, Antipyretic, Adaptogenic, Antitumor, Anti-tussive, Chemo-preventive, Radio, Chemo, and Immunomodulatory, Free radical scavenging, Anti-mutagenic, Hepatoprotective, CNS activity.

Research Works^[9]

- ❖ **Anti-diabetic property and hypoglycemic activity:** Emblica fruit powder reduced blood sugar levels in normal rabbits, as well as in hyperglycemic rabbits proving the hypoglycemic activity (Tripathi et al., 1979).
- ❖ **Hypo-lipidemic and anti-atherosclerotic activity:** Amla (fed to rabbit) showed hypo - lipidemic and anti-atherosclerotic activity (Mand et al., 1991).
- ❖ **Anti-microbial activity:** Emblica fruit found to have very potent anti-bacterial activity (Vinayagamorthy, 1982).
- ❖ **Anti-inflammatory:** The water fraction of the methanol extract of leaves was effective in rat paw inflammation (Summanen et al., 1993).

- ❖ **Anti-oxidant:** The long-lived belief that the therapeutic effects of *amla* is due to its rich vitamin C content has thus been dispelled. The potent vitamin C-like activity of *amla* fruits has now been located in the low Mr hydrolysable tannins. Four such compounds, Emblicanin A, Emblicanin B, Puniglucomin and Penduculagin, have been isolated from the fruit pericarp (Ghosal et al., 1996).
- ❖ **Rasayana activity:** *Amalaki rasayana* is said to have growth promoting effect (growth and longevity), (Tewari et al; 1968).

DISCUSSION^[10,11]

Amalaki is called as a wonder drug because of its multi-dimensional actions. It is used in all most all the *kriya kalpas* which shows its significance in *netraroga*. By

going through the *samhitas*, it has been noted that *amalaki* is used more in the preparations of *anjanas* used for *drushtigata rogas* which indicates that it can reach the *drushti* (posterior segment) and nourish the same.

- ✓ There is a strong relationship between antioxidants and vision health. Antioxidants are the antidote to oxidation. Free radicals produced as a part of metabolism are the atom that lacks an electron. They roam about the body, scavenging electrons and stealing electrons from healthy cells. This results in permanent damage to these afflicted cells which ultimately can result in disease. Significant research has shown that antioxidants protect against this cellular damage and are essential for maintaining health. The eye is vulnerable to free radical damage. Therefore, providing the body with sufficient antioxidants helps to prevent eye disease and maintain healthy vision.
- ✓ Tannins are biological antioxidants; they are widely believed to be an important line of defence against oxidative damage which has been implicated in a range of pathological conditions including aging. Tannoids might counter the polyol pathway-induced oxidative stress as there was a reversal of changes with respect to lipid peroxidation, protein carbonyl content, and activities of antioxidant enzymes.
- ✓ Diabetic cataracts are caused by an elevation of polyols within the lens of the eye catalyzed by the enzyme aldose reductase. It has been a drug target because of its involvement in the development of secondary complications of diabetes, including cataract. Suryanarayana *et al.* assessed the inhibition of aldose reductase by constituents of *E. officinalis* both in vitro and in lens organ culture.
- ✓ The level of glutathione in the lens alters with advancing age. *Amalaki* is a rich source of glutathione and ascorbic acid which protects the lens against oxidative damage and further helps to maintain the normal glutathione mechanism.
- ✓ Cysteine, glycine and glutamine are especially important for vision because they help to build glutathione, which is essential for eye.

CONCLUSION

Acharya Charaka by knowing its importance, he included *Amalaki* under "*Nithya sevaniya dravya*".¹³ Being a *Sheetavirya* dravya it helps to nourish the *chakshu* which is *sheetasatmya*. It has been used in many forms which indicate its rational usage in almost all the *netra rogas*. Being a rich source of Vitamin C, have antioxidant property, act as free radical scavenger and therefore can prevent ocular degenerative conditions such as cataract, ARMD etc. executing this anti-atherosclerotic activity, anti-inflammatory activity, anti-oxidant, anti-microbial activity, *amalaki* has drawn much attention in treating posterior segment diseases. As it is clearly said by our *acharyas*, it has to be consumed daily as a *Pathya* to get rid of degenerative processes of eye and even for *swasthyarakshana*.
